PROJECT UPDATE

Dear project resident,

Most of you have seen construction taking place along the various project routes and many have met with the contractor, project manager or resident project representative (RPR) about the location and type of connection that will connect your home to the sewage collection system. At the conclusion of the construction project, following all applicable testing and approvals, you will be required to make connection from your home to the District's sewer system and existing on-site septic systems will also need to be de-commissioned in accordance with the standards of the Adams County Department of Health.

The Contractor's installing the new sewer system remain on schedule to finish in the middle of June of this year and connection notices would be issued following the completion of their work. With regard to restoration, the construction agreements require the contractors working for the District to re-grade and re-seed the disturbed areas as well as patch damaged areas of pavement or driveways at the end of the project.

Should your property require a grinder pump station, the easement documents previously sent will need to be signed and returned to the RPR (Dave Hiatt, 260-633-0098) or District prior to any work commencing on your property. **Easements need to be granted by the end of April 2017 or else any additional costs for the delay of work may become the responsibility of the property owner in addition to costs associated with connecting the sanitary service from the home to the grinder pump station. The District will provide power to the grinder pump station installations.**

We encourage users to attend monthly meetings or submit your questions via email to jhardy@contactcei.com or mail to the District. The Adams County Regional Sewer District Board will meet on **April 13, 2017 at 5:00 pm** at the Decatur Riverside Center for their regular Board Meeting with an Informational Meeting to follow at **6:00 pm**. **Schematics and specifications associated with potential grinder pump station and gravity sewer connections and unsigned grinder pump easement documents will be available at the Informational Meeting.**

The District wants to make every reasonable effort to work with you and other affected property owners for this important project. The District will attempt to be responsive to your inquiries or issues.

Thank you for your patience, assistance and cooperation.

**Board of Trustees,
Adams County Regional Sewer District**
